CUSTOM SOFTWARE DEVELOPMENT SERVICE IN MALAYSIA

Qubit Warehouse Management System (WMS)

Smart WMS to 300% improve your overall warehouse operation and order fulfillment capacity up to 10,000+ daily orders.

Shopee, Lazada and TikTok merchants, are you still using Excel to manage your inventory and fulfill hundred above daily orders in traditional way? Your workload will be heavy and may also face the following problems..

Inaccurate inventory control

You are selling many SKUs. Manually recording the item inventory in Excel alone can cause the product quantity to not tally across channel records and thus, oversell. You'll also have a hard time deciding on stock replenishment based on the unreliable inventory data.

Spend long time on order picking

There are many kinds of products you are selling and the products are placed everywhere without labels in the warehouse. The picking list also does not state the items belong to which rack in the warehouse. As a result, your employees will be spending lots of time searching for the items.

Tend to fulfill the wrong items

When employees work for long hours, they may accidentally pack the wrong items, or even double pack the same order. Manual inspections can be done each time to prevent such mistakes, however, they are time-consuming and extremely inefficient.

Shopee, Lazada and TikTok merchants, are you still using Excel to manage your inventory and fulfill hundred above daily orders in traditional way? Your workload will be heavy and may also face the following problems...

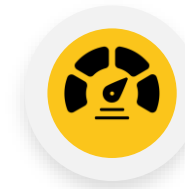

Over-reliance on senior employees for order picking

Senior employees can pick up the order items immediately because they know your warehouse very well. However, if they are on leave or were to resign from their jobs, it would take time for new employees to become familiar with your warehouse. This will slow down your fulfillment speed and cause late shipment to your customers.

Increase in your labour costs

Your orders will tremendously increase when there is a Shopee or Lazada campaign. If you are still using traditional ways to fulfill your orders, you will need to hire more workers or even work for longer hours to fulfill the orders. Your labour cost will increase and may reduce your profit margin.

Hard to measure your employees performance

It is hard to know how your employees are performing on their jobs without the help of a system. At the same time, it is also impossible to use CCTV to observe your employees' work all the time.

QUBIT WMS Process Flow

1

Receiving

Verify and record incoming stocks in Qubit system to make sure the stocks are of the right quantity.

2

Put away

Move the incoming stocks from the receiving dock to the right storage location in the warehouse.

3

Storage

Store incoming stocks and arrange all hot-selling items in the hot-selling picking area to enable fast picking.

4

Order Picking

Pickers receive task lists and start picking items with a trolley by scanning the item barcode with a PDA or smartphone device.

5

Order Sorting

Sorters bulk print customizable shipping labels and sort items into different baskets based on order.

6

Order Packing

Packers scan the item barcodes to make sure the right items, in the right quantity is packed. After the items have been wrapped and sealed, the relevant shipping label is attached to the order package.

7

Shipping

Finally, ready your packages for delivery by grouping all the packages based on the courier company and generate carrier manifests to keep a record of your shipped out orders.

12 reasons to use Qubit WMS

1

1 integrated system for ERP & WMS

Faster and real-time data syncing without having to log into 2 different systems to manage ERP and WMS.

3

More than 4 warehouse management modes

On-site warehouse audit to select the best order picking modes that can help increase your warehouse productivity and speed up your order fulfillment process.

2

Cloud-based POS System

Manage your warehouse sales and unify your retail and online inventory.

4

Support PDA or smartphone device for order picking

No more printing multiple picking lists. Qubit WMS supports a paperless solution. Pickers can quickly and accurately complete the picking alone by simply scanning the item barcode with a PDA or smartphone device.

5

Observe employee's KPI anytime

Now you can view your employee KPI through the system. Every work process carried out by the employee as well as daily or monthly employee performance will be recorded. In this way, you can reward employees who perform well and inspire other employees to be competitive.

7

Multi-warehouse management feature

Qubit system also supports multi-warehouse management, making it easier for you to modify warehouse rack location, transfer between multiple locations, manage inbound and outbound warehouses, order returns and more.

6

Customize your shipping labels

You can also customize your Lazada, Shopee and TikTok Shipping Labels, packing lists, invoice and courier service setting based on your preferences. If you are selling fragile items, you can also use Qubit to print shipping labels with fragile remarks!

8

Generate Carrier Manifests

You can also generate a Carrier Manifest based on the logistics company or the date to record daily fulfilled orders and let the logistics service provider sign for the collection.

12 reasons to use Qubit WMS

9

Simple and easy to use

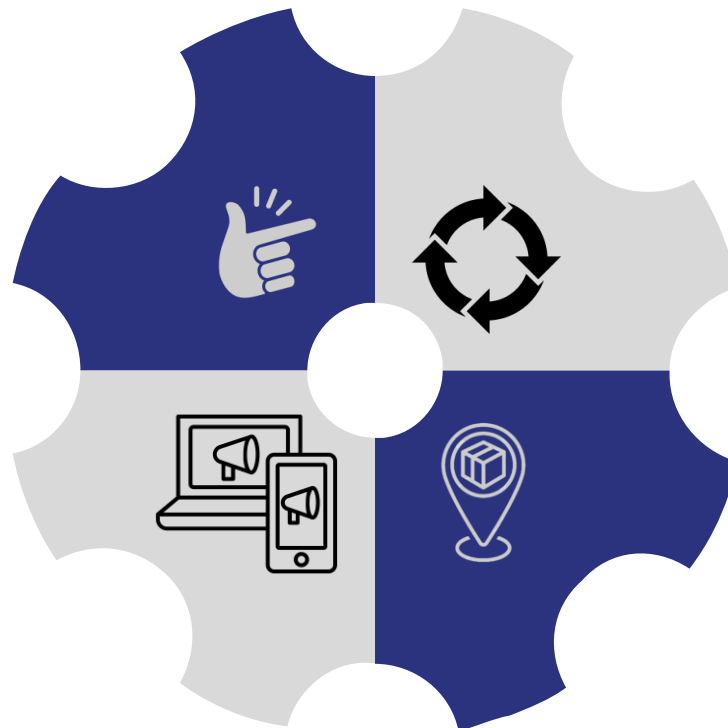

Automate your employee management.

New employees can perform the job immediately with the system guide to take the task. They can also complete the order picking job in a short time alone without having to remember the item variants and the warehouse location.

11

Multichannel integration available

Unify product management and stock synchronization across multiple online platforms such as Shopee, Lazada, TikTok, Zalora, Webstore, Shopify, WooCommerce and many more.

10

Complete warehouse management flow

Qubit warehouse management system comes with advanced inventory and order fulfillment flow which includes setting up inventory locations, receiving and packing orders and much more. Your team can not only work efficiently, but also experience a faster overall order fulfillment speed.

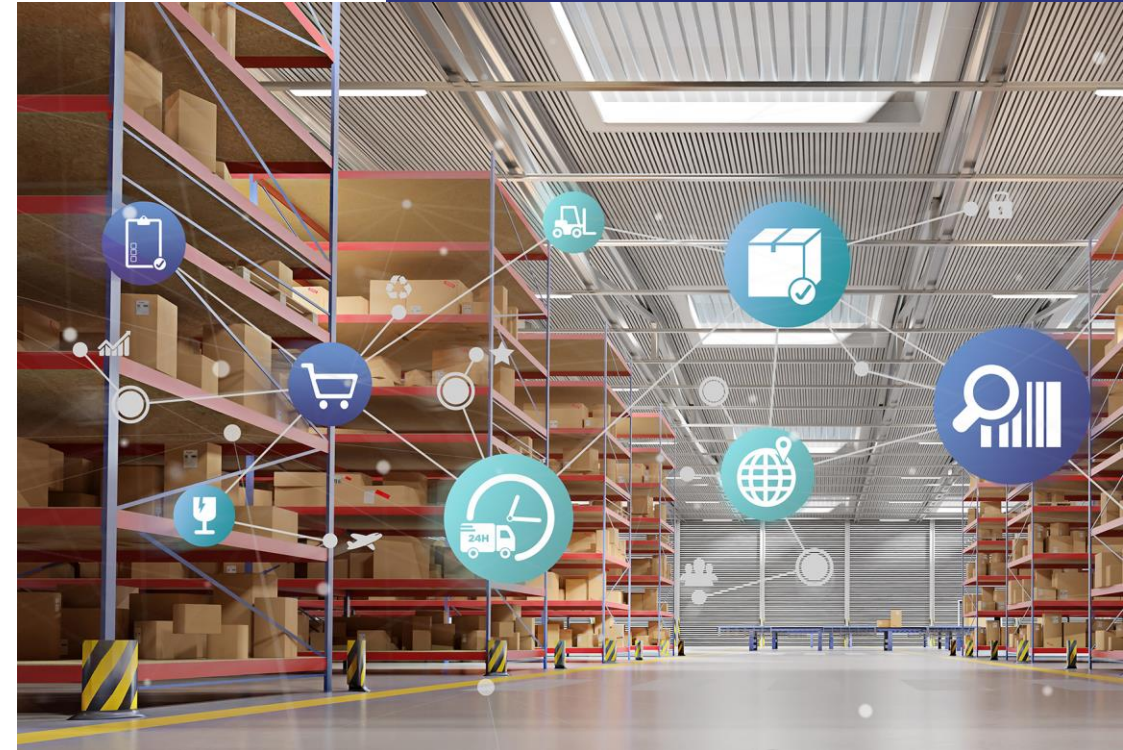

12

Set up a pick-up area for hot-selling items

You can put all hot-selling items in the hot-selling picking area so that you can reduce trips to pick up specific items in the warehouse.
